Anche CoolerMaster annuncia di aver realizzato sistemi di ancoraggio per socket 1366

Cooler Master is Ready for Intel Core i7 LGA 1366 Socket

LGA 1366 Retention Bracket for Wide Range of Cooler Master CPU Coolers

Cooler Master introduces the Intel Core i7 Socket LGA 1366 retention bracket which is compatible with a wide range of coolers that includes: V8, Hyper Z600 series, Hyper 212 and Geminii S. For some of these models, the retention bracket will eventually be included in the retail pack; making these coolers fully supporting all current sockets on the market: Intel LGA 775, LGA 1366 and AMD Socket 940/AM2/AM2+ compatible.

The backplate is conveniently designed so that it installs on top of Intel's stock LGA1366 backplate, hence reducing the risk of damaging the socket during installation on X58 chipset motherboards.

Il KIT in dettaglio

Alcuni modelli di dissipatori Cooler Master pronti per il nuovo KIT

			
Z600	Hyper 212	Gemini S	V8
